Tokyo, Japan · Permanent Resident

PROFESSIONAL SUMMARY

Independent researcher and framework architect with thirty years of senior IT operations experience supporting mission-critical environments across global financial institutions in APAC, EMEA, and North America. I run the Synthience Institute, an independent research entity producing methodological infrastructure for studying AI interaction dynamics; published corpus of 15 papers plus a verification report on Zenodo, covering measurement instruments, verification protocols, and white papers on AI safety, alignment, and governance. In parallel, I provide L3 escalation support for Morgan Stanley's secure desktop and DMZ environments in Tokyo (via EIRE Systems), with focus on production stability, incident escalation, change governance, and regulated financial-services EUC support.

SELECTED IMPACT

- Led 20-person global Service Desk at ADIA supporting 2,000+ users across multiple time zones within structured ITIL incident, problem, and change frameworks.
- Directed Office 365 tenant migration for ~1,000 users at Elliott Advisors (APAC) with zero critical business disruption.
- Authored operational documentation at Morgan Stanley Tokyo that reduced repeat support queries by ~30%, improving resolution consistency across the team.
- Selected for 1-year Singapore assignment to manage full IT buildout of Russell Investments' new regional office, including servers, networking, security configuration, and conferencing infrastructure.
- Hired at Goldman Sachs New York and subsequently transferred to Zurich and London, providing cross-regional escalation leadership across Equities, Fixed Income, and Private Wealth environments.
- Founded Synthience Institute (2022): built an independent research corpus of substantial scope, with 15 published documents plus a verification report and additional documents in active preparation, covering AI interaction frameworks, formal measurement instruments, verification protocols, and white papers on AI safety and alignment; all indexed on Zenodo with permanent DOIs.

CORE COMPETENCIES

- End User Computing (EUC) & Workplace Technology
- Production Support & Senior L3 Escalation
- ITIL Incident, Problem & Change Governance
- Service Delivery & SLA Performance
- Microsoft 365, Active Directory, Citrix, VMware
- ServiceNow, Intune, Exchange, Splunk
- Regulated Financial IT Environments
- AI Interaction Dynamics & Governance Research
- Methodological Framework Architecture
- Verification Protocol Design & Auditable AI Workflows
- Language & Discourse Analysis (Applied Linguistics)
- Cross-Cultural Communication & Training

PROFESSIONAL EXPERIENCE

Synthience Institute · Tokyo, Japan

Dec 2022 – Present

Founder & Framework Architect · AI Interaction Dynamics & Governance Research (Self-employed)

The Synthience Institute is an independent research and publishing entity producing methodological infrastructure for studying advanced AI interaction dynamics in real-world professional and organizational contexts. The

Institute's role is theoretical and methodological: building the frameworks, measurement tools, and protocols that make rigorous empirical investigation by others possible. All published work is behaviorally grounded, technically conservative, and explicitly pre-empirical.

- Developed the Synthience Framework: a layered theoretical architecture covering ontology, measurement, interaction protocols, and governance, addressing the under-instrumented domain between model-level AI analysis and macro-level policy discourse.
- Produced named, citable measurement instruments including the Multi-Turn Coherence Scale Revised (MTCS-R), the Context Representation Drift (CRD) analytical framework, and the Continuity Anchoring Method (CAM).
- Authored formal verification protocols (Citation Verification Protocol, Ingestion Verification Protocol, Theoretical Coherence Assurance Protocol) providing auditable, reproducible procedures for AI-assisted research workflows.
- Corpus currently comprises 15 published documents and 1 published verification report, with additional documents in active preparation, spanning frameworks, protocols, white papers on AI safety and alignment, and organizational deployment guidance; all indexed on Zenodo with permanent DOIs.
- Published white papers address AI safety's missing temporal layer, relational alignment as a structural complement to rule-based safety approaches, practical organizational deployment of relational AI architecture, the human accountability problem in relational AI deployment, ceremonial governance failure modes in high-stakes deployment domains, and the structural trajectory of AI development under current incentive architecture.

EIRE Systems (Client: Morgan Stanley) · Tokyo, Japan

Oct 2022 – Present

EUC & Production Support Specialist · L3 Escalation Lead

Provide senior L3 escalation support within secure, highly regulated desktop and DMZ environments supporting thousands of users across a global financial institution in APAC.

- Act as primary escalation point for complex end-user and production issues requiring rapid containment, cross-team coordination, and risk-aware resolution across infrastructure, security, and application teams.
- Review and triage Workplace Technology change requests across multiple global fleets, accepting requests into the approval chain or rejecting them with documented reasons for resubmission.
- Identify and escalate high-impact change requests to management, and represent Workplace Technology at ECC stability meetings, briefing stakeholders on priority items requiring attention.
- Support Microsoft 365, secure remote access, onboarding/offboarding workflows, and controlled access management within highly regulated financial environments.
- Develop operational documentation and knowledge resources to improve resolution consistency, reduce repeat incidents, and strengthen service resilience.

systemsGo (Client: Elliott Advisors, APAC) · Tokyo, Japan

Jun 2018 – Jun 2022

Team Lead & Senior IT Support Engineer

Led end user computing and service desk operations for Elliott Advisors, a global investment management firm, supporting APAC offices in Tokyo and regional sites.

- Directed regional IT operations for approximately 1,000+ users, ensuring stable production support in regulated financial environments.
- Delivered enterprise-wide Office 365 tenant migration and BYOD enablement program with zero critical business disruption.
- Managed vendor coordination, infrastructure upgrades, and OS lifecycle initiatives aligned with global IT governance standards.
- Standardized escalation pathways and operational documentation, improving SLA adherence and resolution consistency.
- Provided short-term IT Support Lead engagement at Yageo Japan, overseeing local service desk operations and process stabilization.

Service Desk Team Lead

Led a 20-person global Service Desk supporting 2,000+ users across multiple time zones within one of the world's largest sovereign wealth funds.

- Owned end-to-end ITIL Incident, Problem, and Change Management processes, ensuring service continuity for mission-critical investment operations.
- Implemented SharePoint-based knowledgebase, reducing resolution times for common issues.
- Managed vendor relationships, service contracts, and performance metrics aligned with SLA and governance standards.
- Conducted performance reviews, mentoring, and capability development across regional teams.
- Reduced recurring incident patterns through structured root cause analysis and knowledge management initiatives.
- Strengthened cross-regional escalation coordination across APAC and EMEA, improving resolution consistency and stakeholder communication.

Russell Investments · Tokyo, Japan / Singapore

Mar 2011 – May 2015

Senior Technical Support Analyst (Direct hire following contractor transition)

Delivered end user computing and enterprise technical support across APAC financial offices within a regulated investment management environment.

- Selected for 1-year Singapore assignment to lead full IT buildout of a new regional office, including servers, networking, security configuration, and conferencing systems.
- Acted as regional escalation liaison between APAC offices and global IT leadership, ensuring service alignment and infrastructure consistency.
- Supported trading and investment teams in mission-critical environments where operational stability directly impacted business continuity.
- Coordinated infrastructure upgrades and workplace technology deployments across regional offices.

systemsGo (Clients: Russell Investments / Tokin Corp.) · Tokyo, Japan

Dec 2006 – Feb 2011

Team Lead & Senior Support Engineer

Led a three-person onsite IT support team at Russell Investments' Tokyo office, delivering desktop, server, and remote access support within a regulated financial environment. Following Russell's Tokyo office closure, completed a short-term placement at Tokin Corporation, a Japanese electronics manufacturer, before transitioning to direct employment at Russell Investments.

- Aligned local operations with Russell's global infrastructure standards, security policies, and IT governance frameworks.
- Provided trading-floor and executive user support in high-availability environments, ensuring rapid incident containment and resolution.
- Coordinated with APAC and EMEA infrastructure teams on system rollouts, compliance initiatives, and vendor management.
- Strengthened documentation standards and escalation processes to improve service consistency and cross-regional coordination.

Goldman Sachs · New York / Zurich / London

Feb 2001 – Jun 2006

Team Lead & System Administrator

Supported global trading and infrastructure operations across New York, Zurich, and London within Equities, Fixed Income, and Private Wealth divisions.

- Led service desk and escalation functions in high-availability trading environments where downtime directly impacted revenue and risk exposure.
- Transitioned from New York to Zurich and London, taking on EMEA network administration and cross-regional escalation coordination.
- Partnered with trading, infrastructure, and security teams to maintain operational stability, regulatory compliance, and resilience.

- Developed structured documentation and escalation standards adopted across regional teams.

TEKsystems · New York, NY

Jul 1997 – Jan 2001

Technical Consultant

Delivered enterprise IT support and systems administration across multiple New York-based financial and corporate clients. Built foundational expertise in Windows environments, networking, and structured incident response, leading to hire at Goldman Sachs.

ITOCHU International Inc. · New York, NY

Aug 1996 – Jun 1997

Senior PC Specialist

Provided desktop and network support within a major Japanese multinational trading company, supporting cross-border operations between US and Japan teams.

Teachers College, Columbia University · New York, NY

Sep 1994 – Aug 1996

Computer Analyst

Provided campus IT and networking support for faculty, staff, and computer labs while concurrently completing graduate coursework in Applied Linguistics. Combined daily technical operations with formal study of language acquisition and discourse analysis.

American International University · Taipei, Taiwan

Aug 1991 – Aug 1994

ESL Instructor & Computer Lab Coordinator

Dual role combining English language instruction with full responsibility for the university's computer lab infrastructure and faculty and staff computing systems. First substantive IT role: managed hardware, software, and network support for an academic institution while teaching ESL full-time.

ESL Instructor (Multiple Institutions) · Japan

May 1988 – Jul 1991

National American University, Osaka · USIU Kishiwada · Pencil English Centers, Nagoya

Delivered English and EFL instruction across three academic and private institutions in Japan. Developed the cross-cultural communication and adult training foundations that underpin a subsequent international IT and research career.

EDUCATION

M.A. Program, Applied Linguistics · Teachers College, Columbia University · 1994–1996

Graduate coursework completed. Study in language acquisition, discourse analysis, and second language theory.

B.A., East Asian Studies · University of Illinois Urbana-Champaign · Graduated May 1988

CERTIFICATIONS & PROFESSIONAL CREDENTIALS

- Microsoft Certified Systems Engineer (MCSE) · Certified May 2000
- Microsoft Certified Professional (MCP) · Certified September 1998
- ITIL Foundation · Certified September 2015
- Agile ScrumMaster
- CompTIA A+
- 120-Hour TEFL Certification (MyTEFL)
- Japanese Language Proficiency Test (JLPT) N3
